U.S. Navy Reorders Promia Products & Services Additional Orders for Promia Cyber Security Products and Services

San Francisco, CA – May 19, 2008 - Promia, Inc., a developer of Enterprise Cyber Security and Asset Monitoring products, today announced that the U.S. Navy has signed an agreement for more products and services in the ongoing 2008 global upgrade. The new contract order includes sections totaling over \$4 million dollars. All currently deployed Promia systems are being upgraded, additional units are being installed, new Engineering Change Orders are in process and Promia continues to deliver onsite cyber training of global Navy network engineering personnel.

Promia Raven products are hardened appliances that identify all traffic from all devices operating on a network. They also provide accurate and consistent detection, validation, and blocking response to internally and externally generated network and host computer intrusions. The devices connect together in a global grid allowing analysts real-time and forensic views of network activity in all sites.

Included is remote asset monitoring and management with the ability to detect and report on devices, computers or applications that are misconfigured, broken or otherwise not operating as expected. The Asset Viewer 3-D tool allows operators to "fly" through the inside of the network viewing aspects of all connected assets, warping from customer facility to customer facility through router, switch, VPN, wireless and other connections.

New Promia Raven devices are more powerful, smaller, less expensive, lighter, use less power and generate less heat than the previous award winning generation of Promia products. They handle larger loads, have more features, are faster and are easier to use. They do a better job in delivering accurate information without overwhelming the human operators or analysts than ever before. The 3-D Graphical User Interfaces are easier to understand and provide more information than previous versions. They identify the newest emerging threats and often protect Navy assets against advanced attacks that are unseen by most other leading cyber security devices.

Promia's President and CEO, John Mullen, stated: "Our products continue to deliver solid value in high stress situations to the military and other sections of our government. As required by our government SBIR contracts, we are also now delivering these products to the commercial sector, with a concentrated focus on protecting our national critical infrastructure. For example, our new Raven tools integrate audit compliance features to help satisfy the Federal Energy Regulatory Commission Critical Infrastructure Protection Reliability Standards."

About Promia, Incorporated

Promia, Incorporated is a leading developer and supplier of security tools, based on open standard components with advanced analytic capabilities, to the Fortune 1000 companies and government markets. Its products are used in environments requiring high security, reliability, performance, and scalability. Promia's core competencies include expertise in a wide range of languages, databases, security systems, communications protocols, hardware devices, artificial intelligence techniques as well as legacy integration and distributed data networks. Since the early 1990's, Promia has been in the forefront of developing secure software infrastructure solutions based on object-oriented technology and open standards for organizations worldwide. Based in San Francisco, Promia has offices in Princeton, UC Davis, and Linthicum, Maryland.
