

FOR IMMEDIATE RELEASE

U.S. Navy Signs Agreements for Global Maintenance Additional Orders for Advanced Cyber Security Products

San Francisco, CA – October 3, 2011 - Promia, Inc., a developer of Enterprise Cyber Security and Asset Monitoring products, today announced the U.S. Navy recently signed two agreements for more products and services for cyber security protection. The contract orders includes more Raven 2100 units, and global warranty, support and maintenance for deployed units in all global Navy Fleet and One Net Network Operating Centers. All currently deployed Promia systems are being replaced or upgraded, and additional units are being installed. The Navy also released the annual Contractor Performance Assessment Report (CPAR) for the 2010-2011 government financial year for Promia and the IASM/Raven technology. The company and products continue to earn strong marks in all categories.

With the next round of deployments the company has released the “Promia Raven 2100 Rev B” appliance which is more than 20 times more powerful than the previous “Promia Raven 2100” appliance. The system is much more capable with respect to CPU, memory, disk, throughput, response time, capacity and in-line load volume.

Promia Raven products are hardened appliances that identify all traffic from all devices operating on a network. They also provide accurate and consistent detection, validation, and blocking response to internally and externally generated network and host computer intrusions. The devices connect together in a global grid allowing analysts real-time and forensic views of network activity in all sites. The Promia Raven 2100 supports in-line analysis and blocking supporting up to six simultaneous full-duplex 1GByte network segments per enclave server.

Included is remote asset monitoring and management with the ability to detect and report on devices, computers or applications that are misconfigured, broken or otherwise not operating as expected. The Asset Viewer 3-D tool allows operators to “fly” through the inside of the network viewing aspects of all connected assets, warping from customer facility to customer facility through router, switch, VPN, wireless and other connections.

New Promia Raven devices are more powerful, smaller, less expensive, lighter, use less power and generate less heat than the previous award winning generation of Promia products. They handle larger loads, have more features, are faster and are easier to use. They do a better job in delivering accurate information without overwhelming the human operators or analysts than ever before. The 3-D Graphical User Interfaces are easier to understand and provide more information than previous versions. They identify the newest emerging threats and often protect Navy assets against advanced attacks that are unseen by most other leading cyber security devices.

About Promia, Incorporated

Promia, Incorporated is a leading developer and supplier of security tools, based on open standard components with advanced analytic capabilities, to the Fortune 1000 companies and government markets. Its products are used in environments requiring high security, reliability, performance, and scalability. Promia's core competencies include expertise in a wide range of languages, databases, security systems, communications protocols, hardware devices, artificial intelligence techniques as well as legacy integration and distributed data networks. Since the early 1990's, Promia has been in the forefront of developing secure software infrastructure solutions based on object-oriented technology and open standards for organizations worldwide. Based in San Francisco, Promia has offices in Princeton New Jersey, and Davis, California.
