

FOR IMMEDIATE RELEASE

Promia, Inc Signs Trusted Technologies, LLC as Sales Partner for the Intelligent Agent Security Manager Product Line

Agreement is part of Promia strategy for expanding IASM sales to civilian government and commercial markets

San Francisco, CA – December 22, 2006 – Promia, Incorporated, a developer of Information Security and Network Monitoring products, announced that it has signed an agreement making Trusted Technologies, LLC an agent to sell Promia Intelligent Agent Security Manager (IASM) network security appliances to government and commercial customers.

The IASM appliance is architecturally designed in a hierarchical, multi-tier network grid; Promia produces IASM appliance models capable of protecting local-, regional-, and global-scope networks. The IASM tracks device and application status, misuse, malicious events, mis-configured equipment and unauthorized access in order to better manage policy throughout complex data networks. IASM collects and consolidates security-relevant events from Promia sensors, host logs, routers, firewalls, network devices, applications, and network security devices and accurately analyzes the events to detect, validate, manage, and automatically respond to security incidents.

Promia's global-scope IASM 6100 appliance has been validated at Common Criteria EAL 3+ level, approved in the DITSCAP accreditation process and passed the U.S. Navy Shock and Vibration testing for shipboard deployment. IASM model 6100 requires 6U of space in a standard rack, while the regional- and local-scope IASM 3100 unit requires only 4U. The IASM has been developed in cooperation with the US Navy to provide real time review of global U.S. Navy networks by personnel in tiers of Network Operation Centers, and is currently deployed in all fleet U.S. Navy Network Operation Centers around the world.

Michael Wiener, Promia's VP of Customer Relations said, "We're extremely pleased to now make the IASM technology available to civilian agencies and commercial markets. The IASM having been deployed globally with the US Navy for a number of years, delivers tried and true SIM capabilities augmented by our 3D GUI enabling network asset visibility to network operations personnel in real-time. We are looking forward to working closely with Trusted Technologies and their customers. John Woodley, CEO of Trusted Technologies, added "Our partnership with Promia enhances our security offerings, bringing a valuable and accurate network security services tool into our repertoire service offerings for our client partners. The Promia product is the most accurate tool I have worked with."

About Promia, Incorporated

Promia, Incorporated is a leading developer and supplier of security tools, based on open standard components with advanced analytic capabilities, to the Fortune 1000 companies and government markets. Its products are used in environments requiring high security, reliability, performance, and scalability.

Promia's core competencies include expertise in a wide range of analysis, computer languages, databases, security systems, communications protocols, hardware devices, artificial intelligence techniques as well as legacy integration and distributed data networks. Since the early 1990's, Promia has been in the forefront of developing high performance technology enterprise solutions based on object-oriented technology and open standards for organizations worldwide. Headquartered in San Francisco, Promia has offices in Princeton NJ, Davis CA, and Linthicum MD.

About Trusted Technologies, LLC

Trusted Technologies provides technical professional services including enterprise messaging and collaboration, custom application development, and network management.

Trusted Technologies embarked on a smart growth strategy in 2003, with an ambitious plan geared towards assembling extensive core competency in the development of Information Technology solutions. This strategy has allowed Trusted Technologies to excel during the most challenging technology era in history.

Dunn & Bradstreet recently completed an open ratings audit of Trusted Technologies' performance from a customers' point of view. Trusted Technologies received a 96% rating, across eight categories, for services and support provided to client partners.
